Dear Candidate,

Thank you for applying for the internship position at the Computational Intelligence Lab, Department of Aerospace Engineering, Indian Institute of Science (IISc), Bangalore.

The first round of the selection process is an assignment. You are required to build a mobile voice agent app with the following setup:

1. Speech-to-Text (STT) and Text-to-Speech (TTS): Both models must run fully on-device (locally on the phone). This is mandatory. You may use either an Android or an iOS phone.
2. LLM: The language model may run on the cloud. You can use free APIs such as Groq or Google Gemini (via AI Studio) for testing and development.

Language support:
The app should support two languages: English and Hinglish (a mix of Hindi and English). A few example sentences the agent should handle well:

- "What is the weather forecast for Bangalore tomorrow?"
- "Can you set a reminder for my meeting at 5 PM?"
- "Mujhe kal subah 7 baje ka alarm set karna hai."
- "Aaj ka schedule kya hai, aur meri next meeting kab hai?"

Evaluation criteria:
- Latency: How quickly the agent responds end to end
- Transcription accuracy: How correctly speech is converted to text in both languages
- Pronunciation quality: How natural and clear the spoken output sounds, especially for Hinglish

Candidates who complete the assignment successfully as per the above parameters will qualify for the next round.

Submission:
Please share the following by end of day, Sunday, 18th October 2026:
- The complete source code (e.g., a GitHub repository link)
- A demo video of the application running on a phone

If you have any questions, feel free to reply to this email.

We look forward to your submission.

Best regards,
Dhruv Shindhe
